

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1. (currently amended) A scraper blade ~~made from~~ of synthetic material moulded on an insert (2), characterised in that the insert (2) is ~~in the form of~~ a metal plate (2) ~~comprising~~ having a first external part (2A) ~~that extends extending~~ a [[the]] base of the scraper blade (1) downwards and a second internal part (2B) inclined with respect to the ~~aforementioned~~ first part, ~~said~~ and this inclination being such that the forces (F) ~~that are exerted~~ acting on the blade when the ~~latter~~ blade is pressed ~~onto the~~ against a conveyor belt or drum are substantially perpendicular to ~~this~~ the second part.
  
2. (currently amended) A scraper blade ~~made from~~ synthetic material ~~moulded on an insert (2)~~ according to claim 1, characterised in that the second part (2A) of plate (2) is folded ~~towards the rear~~ rearwardly of the scraper blade.[[.]]
  
3. (currently amended) A scraper blade made from synthetic material moulded on an insert (2) according to ~~claims~~ claim 1 ~~or 2~~, characterised in that the inclination of the second part (2B) of the plate with respect to the first (2A) is 115°.
  
4. (currently amended) A scraper blade ~~made from~~ synthetic material ~~moulded on an insert (2)~~ according to claim 1, characterised in that the first part (2A) of the plate is situated ~~adjusted to be disposed~~ in front of ~~forwardly~~ the base of the blade (1) when in use.
  
5. (currently amended) A scraper blade ~~made from~~ synthetic material ~~moulded on an insert (2)~~ according to claim 1, characterised in that the second part (2B) of the blade passes through almost the whole of the ~~full~~ thickness of the blade.

6. (new) A scraper blade according to claim 2 characterized that the second part (2A) of plate 2 is folded rearwardly of the scraper blade.

7. (new) A scraper blade made from synthetic material moulded on an insert (2) according to claim 2, characterised in that the inclination of the second part (2B) of the plate with respect to the first (2A) is 115°.

8. (new) A scraper blade according to claim 2, characterised in that the first part (2A) of the plate is adjusted to be disposed forwardly of the base of the blade (1) when in use.

9. (new) A scraper blade according to claim 2, characterised in that the second part (2B) of the blade passes through almost the full thickness of the blade.

10. (new) A scraper blade according to claim 3, characterised in that the first part (2A) of the plate is adjusted to be disposed forwardly of the base of the blade (1) when in use.

11. (new) A scraper blade according to claim 5, characterised in that the second part (2B) of the blade passes through almost the full thickness of the blade.
